The World in Eleven Dimensions: Supergravity, supermembranes and M-theory (Series in High Energy Physics, Cosmology and Gravitation) M.J Duff

A unified theory embracing all physical phenomena is a major goal of theoretical physics. In the early 1980s, many physicists looked to eleven-dimensional supergravity in the hope that it might provide that elusive superunified theory. In 1984 supergravity was knocked off its pedestal by ten-dimensional superstrings, one-dimensional objects whose vibrational modes represent the elementary particles. Superstrings provided a perturbative finite theory of gravity which, after compactification to four spacetime dimensions, seemed in principle capable of explaining the Standard Model. Despite these major successes, however, nagging doubts persisted about superstrings. Then in 1987 and 1992 the elementary supermembrane and its dual partner, the solitonic superfivebrane, were discovered. These are supersymmetric extended objects with respectively two and five dimensions moving in an eleven-dimensional spacetime.

Over the period since 1996, perturbative superstrings have been superseded by a new nonperturbative called M-theory, which describes supermembranes and superfivebranes, subsumes string theories, and has as its low-energy limit, eleven-dimensional supergravity. M-theory represents the most exciting development in the subject since 1984 when the superstring revolution first burst on the scene.

The first book devoted to M-theory, *The World in Eleven Dimensions: Supergravity, Supermembranes and M-Theory* brings together seminal papers that have shaped our current understanding of this eleven-dimensional world, from supergravity through supermembranes to M-theory. Each chapter includes commentaries intended to explain the importance of these papers and to place them in a wider perspective. Each chapter also has an extensive bibliography. The book is of interest to researchers and postgraduate students in particle physics, mathematical physics, gravitation, and cosmology.

From reader reviews:

Ian Gardner:

Information is provisions for folks to get better life, information today can get by anyone at everywhere. The information can be a know-how or any news even an issue. What people must be consider whenever those information which is from the former life are challenging to be find than now's taking seriously which one is suitable to believe or which one often the resource are convinced. If you find the unstable resource then you understand it as your main information we will see huge disadvantage for you. All those possibilities will not happen throughout you if you take The World in Eleven Dimensions: Supergravity, supermembranes and M-theory (Series in High Energy Physics, Cosmology and Gravitation) as your daily resource information.

Nick McAllister:

People live in this new day of lifestyle always attempt to and must have the time or they will get lots of stress from both way of life and work. So , when we ask do people have time, we will say absolutely indeed. People is human not really a robot. Then we request again, what kind of activity are there when the spare time coming to you actually of course your answer will unlimited right. Then do you try this one, reading textbooks. It can be your alternative with spending your spare time, the book you have read is definitely The World in Eleven Dimensions: Supergravity, supermembranes and M-theory (Series in High Energy Physics, Cosmology and Gravitation).

Douglas Leverette:

Playing with family inside a park, coming to see the ocean world or hanging out with friends is thing that usually you may have done when you have spare time, subsequently why you don't try point that really opposite from that. 1 activity that make you not experience tired but still relaxing, trilling like on roller coaster you already been ride on and with addition associated with. Even you love The World in Eleven Dimensions: Supergravity, supermembranes and M-theory (Series in High Energy Physics, Cosmology and Gravitation), you are able to enjoy both. It is very good combination right, you still want to miss it? What kind of hangout type is it? Oh occur its mind hangout folks. What? Still don't understand it, oh come on its known as reading friends.

Janice Arias:

This The World in Eleven Dimensions: Supergravity, supermembranes and M-theory (Series in High Energy Physics, Cosmology and Gravitation) is brand-new way for you who has attention to look for some information given it relief your hunger details. Getting deeper you on it getting knowledge more you know or else you who still having little bit of digest in reading this The World in Eleven Dimensions: Supergravity, supermembranes and M-theory (Series in High Energy Physics, Cosmology and Gravitation) can be the light food for you personally because the information inside this kind of book is easy to get through anyone. These books create itself in the form which can be reachable by anyone, yep I mean in the e-book form. People

who think that in book form make them feel sleepy even dizzy this e-book is the answer. So you cannot find any in reading a book especially this one. You can find actually looking for. It should be here for a person. So , don't miss the item! Just read this e-book kind for your better life as well as knowledge.
