Cyber Operations: Building, Defending, and Attacking Modern Computer Networks Mike O'Leary

Learn to set up, defend, and attack computer networks. This book focuses on networks and real attacks, offers extensive coverage of offensive and defensive techniques, and is supported by a rich collection of exercises and resources.

You'll learn how to configure your network from the ground up, starting by setting up your virtual test environment with basics like DNS and active directory, through common network services, and ending with complex web applications involving web servers and backend databases.

Key defensive techniques are integrated throughout the exposition. You will develop situational awareness of your network and will build a complete defensive infrastructure—including log servers, network firewalls, web application firewalls, and intrusion detection systems.

Of course, you cannot truly understand how to defend a network if you do not know how to attack it, so you will attack your test systems in a variety of ways beginning with elementary attacks against browsers through privilege escalation to a domain administrator, or attacks against simple network servers through the compromise of a defended e-commerce site.

The author, who has coached his university's cyber defense team three times to the finals of the National Collegiate Cyber Defense Competition, provides a practical, hands-on approach to cyber security.

What you'll learn

- How to securely set up a complete network, from its infrastructure through web applications
- How to integrate defensive technologies such as firewalls and intrusion detection systems into your network
- How to attack your network with tools like Kali Linux, Metasploit, and Burp Suite
- How to gain situational awareness on your network to detect and prevent such attacks

Who this book is for

This book is for beginning and intermediate professionals in cyber security who want to learn more about building, defending, and attacking computer networks. It is also suitable for use as a textbook and supplementary text for hands-on courses in cyber operations at the undergraduate and graduate level.

From reader reviews:

Paul Henson:

People live in this new morning of lifestyle always make an effort to and must have the spare time or they will get lot of stress from both everyday life and work. So , when we ask do people have free time, we will say absolutely sure. People is human not really a huge robot. Then we request again, what kind of activity are you experiencing when the spare time coming to anyone of course your answer will probably unlimited right. Then do you try this one, reading guides. It can be your alternative with spending your spare time, typically the book you have read is usually Cyber Operations: Building, Defending, and Attacking Modern Computer Networks.

Cary Freeman:

Playing with family in a park, coming to see the ocean world or hanging out with good friends is thing that usually you could have done when you have spare time, then why you don't try matter that really opposite from that. One particular activity that make you not experience tired but still relaxing, trilling like on roller coaster you are ride on and with addition details. Even you love Cyber Operations: Building, Defending, and Attacking Modern Computer Networks, it is possible to enjoy both. It is great combination right, you still need to miss it? What kind of hang type is it? Oh come on its mind hangout men. What? Still don't get it, oh come on its identified as reading friends.

Warner Gomez:

You can spend your free time you just read this book this guide. This Cyber Operations: Building, Defending, and Attacking Modern Computer Networks is simple to deliver you can read it in the park your car, in the beach, train and soon. If you did not include much space to bring typically the printed book, you can buy the actual e-book. It is make you better to read it. You can save often the book in your smart phone. Consequently there are a lot of benefits that you will get when one buys this book.

David Perrin:

Is it an individual who having spare time in that case spend it whole day by means of watching television programs or just laying on the bed? Do you need something totally new? This Cyber Operations: Building, Defending, and Attacking Modern Computer Networks can be the response, oh how comes? It's a book you know. You are and so out of date, spending your extra time by reading in this brand-new era is common not a nerd activity. So what these textbooks have than the others?
