Plant Integrity Assessment by Acoustic - IChemE Stuart Hewerdine

Acoustic emission monitoring is a powerful tool for checking structural integrity which tells you about the dynamic behaviour of defects. The authors of this useful guide back their claims for acoustic emission monitoring with details of its use on equipment made from metals and glass-reinforced plastic. They explain the methodology, including Monsanto`s established MONPAC procedure and they include results of a questionnaire sent to 92 organisations which use the technique. There are appendices on the use of the technique, international codes and standards plus a bibliography.

IChemE, the Institution of Chemical Engineers, is the center for chemical, biochemical and process engineering professionals worldwide.

We are the heart of the process community, promoting competence and a commitment to sustainable development, advancing the discipline for the benefit of society and supporting the professional development of members.

Some of the areas we publish in include:

- Safety in the process industries - the BP Process Safety series
- Consultancy for chemical engineers
- Project management in the process industries
- Contract management in the process industries - International Forms Of Contract series
- Communication skills for engineers
