Machinery Noise and Diagnostics

Richard H Lyon

Machinery Noise and Diagnostics Richard H Lyon

The forces and motions within machines are the source of sound and vibration produced by the machine. This book discusses how various mechanisms such as gears, electromagnetics, flow, and combustion produce forces and motions, how the machine responds to this excitation, and how the resulting vibrations radiate sound. The book also discusses how these sounds and vibrations can be used to determine the mechanical condition of the machine, and the signal processing methods that are used.
