Outer space is in constant use. Most obviously, billions of `packets' of information travel through it every day, for the infinitely various purposes of countless people and organisations. Space platforms increasingly provide important research data for businesses, institutions, and governments. Taxation issues are inevitable. In fact, tax planners have for several years been engaged in designing tax incentives to enhance the development of space commerce.

A significant focus of this extraordinary book is an in-depth evaluation of the current U.S. discussion of tax rules designed to stimulate space commerce. For the first time such a debate is placed squarely in its complete context of historic developments and constraints, prevailing tax law (in this case the U.S. internal revenue code), and the body of international and national space law that began with the 1967 Space Treaty. Valuable comparative analysis is provided by examination of corresponding schemes evolving in Canada, Japan, Australia, and France.

competitiveness and economic efficiency.
