Mashups: Concepts, Models and Architectures (Data-Centric Systems and Applications) Florian Daniel, Maristella Matera

Mashups have emerged as an innovative software trend that re-interprets existing Web building blocks and leverages the composition of individual components in novel, value-adding ways. Additional appeal also derives from their potential to turn non-programmers into developers.

Daniel and Matera have written the first comprehensive reference work for mashups. They systematically cover the main concepts and techniques underlying mashup design and development, the synergies among the models involved at different levels of abstraction and the way models materialize into composition paradigms and architectures of corresponding development tools. The book deliberately takes a balanced approach, combining a scientific perspective on the topic with an in-depth view on relevant technologies.

To this end, the first part of the book introduces the theoretical and technological foundations for designing and developing mashups, as well as for designing tools that can aid mashup development. The second part then focuses more specifically on various aspects of mashups. It discusses a set of core component technologies, core approaches and architectural patterns, with a particular emphasis on tool-aided mashup development exploiting model-driven architectures. Development processes for mashups are also discussed and special attention is paid to composition paradigms for the end-user development of mashups and quality issues.

Overall, the book is of interest to a wide range of readers. Students, lecturers, and researchers will find a comprehensive overview of core concepts and technological foundations for mashup implementation and composition. Even without low-level coding details, practitioners like software architects will find guidance on key implementation concepts, architectural patterns and development tools and approaches. A related website provides additional teaching material which can be used either as part of a course or for self study.

From reader reviews:

Henry Barba:

Here thing why that Mashups: Concepts, Models and Architectures (Data-Centric Systems and Applications) are different and trusted to be yours. First of all reading through a book is good nonetheless it depends in the content of it which is the content is as scrumptious as food or not. Mashups: Concepts, Models and Architectures (Data-Centric Systems and Applications) giving you information deeper and in different ways, you can find any reserve out there but there is no book that similar with Mashups: Concepts, Models and Architectures (Data-Centric Systems and Applications). It gives you thrill reading through journey, its open up your own personal eyes about the thing that will happened in the world which is maybe can be happened around you. You can actually bring everywhere like in recreation area, café, or even in your technique home by train. For anyone who is having difficulties in bringing the imprinted book maybe the form of Mashups: Concepts, Models and Architectures (Data-Centric Systems and Applications) in e-book can be your alternative.

Latosha Page:

This Mashups: Concepts, Models and Architectures (Data-Centric Systems and Applications) are generally reliable for you who want to be described as a successful person, why. The reason why of this Mashups: Concepts, Models and Architectures (Data-Centric Systems and Applications) can be among the great books you must have is definitely giving you more than just simple studying food but feed anyone with information that possibly will shock your earlier knowledge. This book will be handy, you can bring it all over the place and whenever your conditions throughout the e-book and printed types. Beside that this Mashups: Concepts, Models and Architectures (Data-Centric Systems and Applications) giving you an enormous of experience like rich vocabulary, giving you trial run of critical thinking that could it useful in your day exercise. So , let's have it and enjoy reading.

Casey Timmons:

In this time globalization it is important to someone to find information. The information will make anyone to understand the condition of the world. The healthiness of the world makes the information better to share. You can find a lot of recommendations to get information example: internet, newspapers, book, and soon. You can see that now, a lot of publisher in which print many kinds of book. The actual book that recommended to you personally is Mashups: Concepts, Models and Architectures (Data-Centric Systems and Applications) this publication consist a lot of the information in the condition of this world now. This kind of book was represented how does the world has grown up. The terminology styles that writer value to explain it is easy to understand. Often the writer made some investigation when he makes this book. That is why this book appropriate all of you.

Jo Jordan:

As a college student exactly feel bored to reading. If their teacher inquired them to go to the library in order to make summary for some e-book, they are complained. Just very little students that has reading's heart and soul or real their passion. They just do what the teacher want, like asked to the library. They go to presently there but nothing reading critically. Any students feel that reading through is not important, boring and also can't see colorful pics on there. Yeah, it is to become complicated. Book is very important for you personally. As we know that on this period, many ways to get whatever we really wish for. Likewise word says, many ways to reach Chinese's country. Therefore this Mashups: Concepts, Models and Architectures (Data-Centric Systems and Applications) can make you truly feel more interested to read.
